

[illegible]

There are five LEDs which are used to write every alphabet letter.

To write the word 'HELLO', a fourth part of the whole wheel would be used. If the bike rpm are known, the time for each lap of the wheel can be calculated. For example, if the bike speed is 60 rpm, each lap lasts 1 second, and for this reason each letter should last 0.2 seconds, so for letter 'H', 0.05 seconds would be used for each part of the algorithm described before, as well as for the transitions between letters.

Title		
Led valve for bike design
